**CLAIM LISTING**

Claims 1-12 are currently pending in the application.

The following listing of claims 1-12 represents the original claims contained in the application:

1. (Original) A method for purchasing and replenishing wireless network calling time, comprising:
  - purchasing wireless network calling time through a Web site;
  - saving data encoding the purchased calling time from the Web site to a portable networking device;
  - transmitting the data encoding the purchased calling time from the portable networking device to an onboard system.
2. (Original) The method of claim 1 further comprising:
  - saving an encrypted record of data associated with the purchase within the Web site record structure.
3. (Original) The method of claim 1 further comprising:
  - maintaining an updated record of remaining calling time within the onboard system.
4. (Original) The method of claim 3 further comprising:
  - notifying the subscriber when less than a specified amount of calling time remains.

5. (Original) A computer-usable medium including a program for purchasing and replenishing wireless network calling time, comprising:
  - computer readable code for purchasing wireless network calling time through a Web site;
  - computer readable code for saving data encoding the purchased calling time from the Web site to a portable networking device;
  - computer readable code for transmitting the data encoding the purchased calling time from the portable networking device to an onboard system.
6. (Original) The computer-usable medium of claim 5 further comprising:
  - computer readable code for saving an encrypted record of data associated with the purchase within the Web site record structure.
7. (Original) The computer-usable medium of claim 5 further comprising:
  - computer readable code for maintaining an updated record of remaining calling time within the onboard system.
8. (Original) The computer-usable medium of claim 7 further comprising:
  - computer readable code for notifying the subscriber when less than a specified amount of calling time remains.
9. (Original) A system for purchasing and replenishing wireless network calling time, comprising:
  - means for purchasing wireless network calling time through a Web site;
  - means for saving data encoding the purchased calling time from the Web site to a portable networking device;
  - means for transmitting the data encoding the purchased calling time from the portable networking device to an onboard system.
